

ABSTRACT OF THE DISCLOSURE

A turfgrass or landscape planting moisture and air reservoir, base soil weed germination preventor, and insect soil movement preventor employing a substantially continuous dimensional reticulated panel on the soil surface which turf grass or ornamental landscape plantings are placed or produced, the panel allowing the turf grass and ornamental landscape planting roots to go downward through it but not allowing the leaf or stem area of weeds sprouting from the base soil to move up through it and also not allowing insects to move up or down through it and holding air and water within its area for the turf grass or ornamental plant roots growing through the pane material.
